**Directions**

UCF RESTORES is located on the 2nd floor of the Psychology Building on UCF’s Main Campus in Orlando. To get here, enter campus through Gemini Blvd. N. and drive past the Lake Claire Dorms. Make a right just before the FAIRWINDS Alumni Center and continue straight to the oval-shaped parking lot directly in front of the Psychology Building.

There is a parking lot reserved for patients of the clinic at no cost. Please enter through the Psychology lobby entrance and take the elevator to the 2nd floor, Suite 203.

**Trauma Management Therapy Program Director**

Dr. Deborah Beidel is the Director of UCF RESTORES, and a Trustee Chair and Pegasus Professor of Psychology and Medical Education. She is recognized internationally for her work in trauma and anxiety.

Dr. Beidel was an integral part of the outreach team to first responders in the Orlando community after the Pulse Nightclub shooting in June 2016.

Along with her colleagues, Drs. Clint Bowers, Sandra Neer, Amie Newins, and David Rozek, she directs UCF RESTORES, a multi-disciplinary center that uses technology to enhance and disseminate empirically supported treatments for anxiety, stress and trauma-related disorders.

Responding to tragedy is your job
Helping you cope is ours
Trauma Management Therapy

First responders and medical professionals render aid every day to individuals who have experienced trauma, but how often do we think about the impact of that work? Helping people through traumatic events, over and over again, can itself be traumatic, and the professionals who do this work are particularly susceptible to suffer the effects of Posttraumatic Stress Disorder (PTSD).

Those who suffer with PTSD may re-experience traumatic events through intrusive thoughts, dreams or flashbacks, and it's common for them to avoid activities, places or people that remind them of those events.

PTSD can have a devastating impact, but it can also be treated, and at UCF RESTORES that treatment is having unprecedented success for first responders and medical professionals.

How Common is PTSD?

PTSD may affect about 8% of the adult population in the United States. At-risk groups, such as first responders, have much higher rates, up to 18%.

How is PTSD Treated?

Successful treatment is based on a scientific process known as extinction. Imagine you have a fear of dogs. If dogs are avoided, the fear becomes stronger, but if you come into contact with dogs (in a controlled manner), the fear will decrease (or extinguish).

Traumatic events are more complicated but are treated in much the same way. Under the guidance of clinical professionals at UCF RESTORES, repeated exposure to thoughts or images of traumatic events reduces fear and anxiety.

We do this through individualized exposure therapy that incorporates virtual reality to re-create traumatic events as accurately as possible, greatly increasing the effectiveness of PTSD treatment.

Trauma Management Therapy also includes a group program which helps participants learn to deal with the anger, depression, sleep problems, and social isolation that often accompany stress and trauma. Following treatment, 76% of first responders no longer meet the diagnostic criteria for PTSD, an unmatched success rate that points to the effectiveness of this unique approach.

Who can you call?

If you have experienced a traumatic event, please call to schedule a confidential phone interview with our Clinical Care Coordinator at 407-823-3910 option 1.
